The COVID-19 Exposure and Family Impact Survey (CEFIS) was developed using a rapid iterative process in late March/early April 2020. At that time the COVID-19 pandemic was impacting most, if not all, American families to some extent. Communities were coming under “stay at home” orders, schools were closing, and health and financial implications of the COVID-19 pandemic were unfolding. This modification of CEFIS for adolescents and young adults, ages 15-29, was completed in early May 2020.

Various aspects of the COVID epidemic are likely to impact individuals and families and may influence the findings of research in health. CEFIS-AYA was designed to be used in ongoing and new studies where COVID-19 may influence study outcomes. It conceptualizes exposure to potentially traumatic aspects of COVID-19 and assesses the impact of the pandemic on the individual and family. It is available in English and Spanish.

CEFIS-AYA is available for use without charge through the Center for Pediatric Traumatic Stress (CPTS). It is available as a REDCap survey. We ask that you register with us before using it and provide us with information about your use and share de-identified data with us to that we can refine the measure. We will provide a REDCap data dictionary to facilitate this process. There is no normative data nor clinical cutoffs available at this point. Interested users should contact Gabriela Vega (gabriela.vega@nemours.org).

Scoring
- Part 1 (Exposure) consists of 28 items (Yes/No responses) that measure the participants’ “exposure” to COVID-19 and related events. Items #17-20 have two parts. If either is marked “yes” the item scores as an exposure. The Exposure Score is a count of “yes” responses and may range from 0 to 28.
- Part 2 (Impact) consists of 16 items that measure the impact of COVID-19. 15 items use a four-point Likert scale rating impact on the participant’s and family’s life; 1 item uses a 10-point distress scale. Higher scores denote more negative impact / higher distress. The Impact Score (sum of items 29-44) may range from 15 to 70.
- Part 3 is an open-ended question so that participants can expand upon their experiences and add effects of COVID not covered in the other questions.
